This book examines the interrelations between language and society in the German-speaking countries. The questions 'what is German and who speaks it?' and 'how does the language vary dependent on social, political and geographical factors?' are addressed and placed in their historical context. This is a comprehensive account of major topics in the contemporary study of German sociolinguistics, and topics covered include the history and development of the German language, German as a minority language, minority languages in German-speaking countries, traditional dialects, variation in contemporary colloquial speech, the influence of English on German, and German in East and West. It draws together much otherwise inaccessible material from a great range of sources. The authors also assess critically research work carried out in German-speaking countries.

Nowadays thousands of grammar books, textbooks, outlines, references and language guides of Spanish, Portuguese, Italian and French are published year by year. However, all of them teach these languages separately. Here you will find a comparative grammar of the four major Romance languages together based on their grammatical and lexical similarities for you, lovers of foreign languages, to learn and compare Spanish, Portuguese, Italian and French simultaneously. It is an audacious endeavor to find or create a novel way of learning to speak several languages and becoming a multilingual person. It took me over 3 years to finish the book. It consists of over 800 pages, 10 chapters covering all the grammatical aspects of these 4 languages. It includes over 1000 examples, 500 easy-to-follow charts and tables. It contains 138 geographical, historical and cultural facts about Spanish, Portuguese, Italian and French countries. Below I will discuss several reasons why I decided to write this book and why you need it. 1) First of all, this book is written for readers like you who are fond of or would like to learn Spanish, Portuguese, Italian and French simultaneously or just to get an all-round knowledge of all these four Romance languages.

It is designed not only for beginners who do not have an extensive knowledge of grammar, yet need a guide through the grammatical concepts of all mentioned above languages, but also intermediate and advanced students who would like to have a reference book of several Romance languages at once. 2) Second of all I spent many years learning these languages separately, which was a complete waste of time before I realized it. This book will hopefully save you a great deal of time and allow you to study and compare at a glance the four main Neo-Latin languages. 3) Knowledge of foreign languages is fast becoming a necessary requirement for those who are involved in international business, tourism, culture and education. This book offers you four languages to learn, which will make you feel at homewherever you go, whether as a tourist or businessman. 4) Learning several languages simultaneously or one by one will train and strengthen your memory and can help stave off such terrible diseases as Alzheimer's. 5) If you have never studied several languages at once before and you like challenges, then you should definitely try it. Because it is a really entertaining and challenging task to do. In conclusion, I would like to sincerely thank you for preordering the book and your interest in it. I hope it will help you improve your languages and become multilingual.

Greenberg's Language Universals is typical of his typological-theoretical work in its stunning originality. Starting out from the observations underlying Praguian markedness, Greenberg contributes a mass of new data and generalizations and lays the foundations for a post-structuralist, usage-based theory of grammatical asymmetries. This work will continue to be influential for many years to come.

The Civil History of the Kingdom of Naples ... Walter de Gruyter
The creation of new lexical units and patterns has been studied in different research frameworks, focusing on either system-internal or system-external aspects, from which no comprehensive view has emerged. The volume aims to fill this gap by studying dynamic processes in the lexicon – understood in a wide sense as not being necessarily limited to the word level – by bringing together approaches directed to morphological productivity as well as approaches analyzing general types of lexical innovation and the role of discourse-related factors. The papers deal with ongoing changes as well as with historical processes of change in different languages and reflect on patterns and specific subtypes of lexical innovation as well as on their external conditions and the speakers' motivations for innovating. Moreover, the diffusion and conventionalization of innovations will be addressed. In this way, the volume contributes to understanding the complex

interplay of structural, cognitive and functional factors in the lexicon as a highly dynamic domain.

Nothing slips by Brecken Hancock's deft ear as she seductively plumbs the depths of the evolution of bathing, doppelgangers, the

Kraken, and the minutiae of family with all its tragic misgivings. The poems in Broom Broom pervert the rational, safe parts of the world to extoll and absorb the sweep of human history. What I mean to say is, the evidence is always there. From where we stand, we confuse lampposts for ghosts. Brecken Hancock's poetry, essays, interviews, and reviews have appeared in several journals, including Event and Fiddlehead. She is reviews editor for Arc Poetry Magazine.

Text Analysis in Translation has become a classic in Translation Studies. Based on a functional approach to translation and indebted to pragmatic text linguistics, it suggests a model for translation-oriented source-text analysis applicable to all text types and genres independent of the language and culture pairs involved. Part 1 of the study presents the theoretical framework on which the model is based, and surveys the various concepts of translation theory and text linguistics. Part 2 describes the role and scope of source-text analysis in the translation process and explains why the model is relevant to translation. Part 3 presents a detailed study of the extratextual and intratextual factors and their interaction in the text, using numerous examples from all areas of professional translation. Part 4 discusses the applications of the model to translator training, placing particular emphasis on the selection of material for translation classes, grading the difficulty of translation tasks, and translation quality assessment. The book concludes with the practical analysis of a number of texts and their translations, taking into account various text types and several languages (German, English, Spanish, French, Italian, Portuguese, and Dutch).
