Economic growth and the creation of wealth have cut global poverty rates, yet vulnerability, inequality, exclusion and violence have escalated within and across societies throughout the world. Unsustainable patterns of economic production and consumption promote global warming, environmental degradation and an upsurge in natural disasters. Moreover, while we have strengthened international human rights frameworks over the past several decades, implementing and protecting these norms remains a challenge. These changes signal the emergence of a new global context for learning that has vital implications for education. Rethinking the purpose of education and the organization of learning has never been more urgent. This book is inspired by a humanistic vision of education and development, based on respect for life and human dignity, equal rights, social justice, cultural diversity, international solidarity and shared responsibility for a sustainable future. It proposes that we consider education and knowledge as global common goods, in order to reconcile the purpose and organization of education as a collective societal endeavour in a complex world.

The popular and highly respected horse trainer Mark Rashid brings together Western and Eastern philosophies to demonstrate a seamless new incarnation of horse training. After years of helping "difficult" horses, Mark Rashid understands how to build the foundation of a horse's training and resolve any problems encountered along the way. He explains how he allows the traditionally firm or assertive approach of the old Western style to

take some lessons from the softer conflict resolution and ego reduction approach that the Japanese martial art of aikido teaches. Rashid's ultimate goal is for harmony between horse and rider.

Douglas Coupland takes his sparkling literary talent in a new direction with this crackling collection of takes on life and death in North America -- from his sweeping portrait of Grateful Dead culture to the deaths of Kurt Cobain, Marilyn Monroe and the middle class. For years, Coupland's razor-sharp insights into what it means to be human in an age of technology have garnered the highest praise from fans and critics alike. At last, Coupland has assembled a wide variety of stories and personal "postcards" about pivotal people and places that have defined our modern lives. Polaroids from the Dead is a skillful combination of stories, fact and fiction -- keen outtakes on life in the late 20th century, exploring the recent past and a society obsessed with celebrity, crime and death. Princess Diana, Nicole Brown Simpson and Madonna are but some of the people scrutinized.

Sport Policy: a comparative analysis of stability and change builds on the growing general interest in the comparative study of sport policy and the more specific interest in processes of policy change and issues associated with policy convergence. In stark contrast to many other areas of public policy such as education, personal welfare and health care there is a paucity of theoretically informed comparative studies in sport. Over recent years there has been a steady increase in public investment in sport and frequently, as a consequence, a sharper debate about how public resources should be used. However, there has been little analysis of the factors that shape the generation of domestic sport policy and little attempt to identify the variables that might influence the policy process. Sport Policy: a comparative analysis of stability and change provides a theoretically informed analysis of the sports systems in Canada, England, Germany and Norway. These economically advanced countries are carefully selected to enable the investigation of the significance of variables and because they share a number of socio-economic and sports-related characteristics, which provides the text with a unique breadth and depth of coverage. This text is a vital addition to the general paucity of literature in this area and is written by an internationally renowned author team.

Why was Switzerland spared a German attack during World War II? Was its existence actually endangered at any time? In Let's Swallow Switzerland, historian Klaus Urner reveals new data uncovered about the actual threats Switzerland faced during the war. Extensive archival research into the events at the Führer's headquarters discloses that Hitler, in cooperation with Mussolini, initiated a surprise pincer operation against Switzerland during the final phase of the French campaign. On June 24, 1940, Army Corps C received orders to prepare for the Special Task Switzerland. In early July, the 12th Army, with nine divisions, was deployed near the Western border of Switzerland. Urner proves that German operational plans were not fictitious designs worked out by a bored staff, as has been claimed, but in fact were serious preparatory measures for an attack. The second half of this fascinating exposé provides a discussion of German economic warfare against Switzerland, revealing that Germany's goal was to control every interaction between Switzerland and the Allies--such attempts continued until the total occupation of France on November 11, 1942. Numerous original documents attesting to Hitler's plans, historic photographs, and a detailed bibliography make this book a fundamental work for understanding Switzerland's difficult predicament during World War II.

Drawing upon historical, cultural, economic and socio-demographic perspectives, this book examines the role of a sporting mega-event in promoting urban regeneration and social renewal. Comparing cities that have or will be hosting the event, it explores the political economy of the games and the changing role of the state in creating post-industrial metropolitan spaces. It evaluates the changing perceptions of the Olympic Games and the role of sport in the global media age in general and assesses the implication of 'mega-event' regeneration policies for local communities and their cultural, social and economic identities, with specific reference to east London and the Thames Gateway.

Full color publication with photographs. A first of its kind, this book-of, by, and for the noncommissioned officer and petty officer-is a comprehensive explanation of the enlisted leader across the U.S. Armed Services. It complements The Armed Forces Officer, the latest edition of which was published by NDU Press in 2007, as well as the Services' NCO/PO manuals and handbooks. Written by a team of Active, Reserve, and retired senior enlisted leaders from all Service branches, this book defines and describes how NCOs/POs fit into an organization, centers them in the Profession of Arms, explains their dual roles of complementing the officer and enabling the force, and exposes their international engagement. As Chairman of the Joint Chiefs of Staff General Martin E. Dempsey writes in his foreword to the book, "We know noncommissioned officers and petty officers to have exceptional competence, professional character, and soldierly grit-they are exemplars of our Profession of Arms." Aspirational and fulfilling, this book helps prepare young men and women who strive to become NCOs/POs, re-inspires serving enlisted leaders, and stimulates reflection by those who have retired from or left active service. It also gives those who have never worn the uniform a better understanding of who these exceptional men and women are, and why they are properly known as the "Backbone of the Armed Forces."

The first section of [this] book discusses classical themes, such as pawn majorities, the centre and structural weaknesses. Watson then moves on to discuss new concepts, including the willingness of modern players to accept backward pawns in return for dynamic play, the idea of a good 'bad' bishop, knights finding useful roles at the edge of the board, and the exchange of sacrifice ideas that became prevalent with the post-war Soviet world champions. ..."--Back cover.

Effectiveness. Efficiency. Excellence. These words and concepts permeate current literature, courses, and discussions. They are defined in nearly as many different ways as the number of people who write and talk about them. For practical purposes, the definitions seem to boil down to these:- Effectiveness - doing the right things.- Efficiency - doing things right.- Excellence - efficiently meeting effective goals, both short term and long range.We believe that this book can help you improve the effectiveness, efficiency and excellence of your system for managing loss control ... and for quality, production and cost control. In essence, it can help improve your management system. Improved quality, production and cost control go hand-in-hand with improved loss control, and they all depend on how the system is managed. The idea that excellence in safety and production go hand in hand is not new. As early as 1928 the American Engineering Council, based on an engineering and statistical study, demonstrated that an organization with decreasing injury rates is eleven times more likely to show increased production than an "unsafe" one.We believe that the book's concepts, practices, techniques and tools reflect what leading organizations around the free world have done, and are doing, to get their results. Spanning more than three decades, we have had the good fortune to work with tens of thousands of leaders in hundreds of organizations to distill the contents of this book. The ideas and applications are tried, tested, and proven. Put them to work and they will work for you.

Nigel Calder, a diesel mechanic for more than 25 years, is also a boatbuilder, cabinetmaker, and machinist. He and his wife built their own cruising sailboat, Nada, a project they completed in 1984. Calder is author of numerous articles for Yachting Monthly and many other magazines worldwide, as well as the bestselling Boatowner's Practical and Technical Cruising Manual and Boatowner's Mechanical and Electrical Manual, both published by Adlard Coles Nautical. Here, in this goldmine of a book, is everything the reader needs to keep their diesel engine running cleanly and efficiently. It explains how diesel engines work, defines new terms, and lifts the veil of mystery that surrounds such engines. Clear and logical, this extensively illustrated guide will enable the reader to be their own diesel mechanic. As Nigel Calder says: 'there is no reason for a boatowner not to have a troublefree relationship with a diesel engine. All one needs is to set the engine up correctly in the first place, to pay attention to routine maintenance, to have the knowledge to spot early warning signs of impending trouble, and to have the ability to correct small ones before they become large ones.'
