Twenty years ago, historians thought they understood the Reformation in England. Professor A. G. Dickens's elegant *The English Reformation* was then new, and highly influential: it seemed to show how national policy and developing reformist allegiance interacted to produce an acceptable and successful Protestant Reformation. But, since then, the evidence of the statute book, of Protestant propagandists and of heresy trials has come to seem less convincing, Neglected documents, especially

the records of diocesan administration and parish life, have been explored, new questions have been asked - and many of the answers have been surprising. Some of the old certainties have been demolished, and many of the assumptions of the old interpretation of the Reformation have been undermined, in a wide-ranging process of revision. But the fruits of the new 'revisionism' are still buried in technical academic journals, difficult for students and teachers to find and to use. There is no up-to-date textbook, no comprehensive new survey, to challenge the orthodoxies enshrined in older works. This volume seeks to fulfill two crucial needs for students of Tudor England. First, it brings together some of the most readable of the recent innovative essays and articles into a single book. Second, it seeks to show how a new 'revisionist' interpretation of the English Reformation can be constructed, and examines its strengths and weaknesses. In short, it is an alternative to a new textbook survey - until someone has time (and courage) to write one. The new Introduction sets out the framework for a new understanding of the Reformation, and shows how already published work can be fitted into it. The nine essays (one printed here for the first time) provide detailed studies of particular problems in Reformation history, and general surveys of the progress of religious change. The new Conclusion tries to plug some of the remaining gaps, and suggests how the Reformation came to divide the English nation. It is a deliberately controversial collection, to be used alongside existing textbooks and to promote rethinking and debate.

"The manner in which computers are now able to mimic human thinking to process information is rapidly exceeding human capabilities in everything from chess to picking the winner of a song contest. In the modern age of machine learning, computers do not strictly need to receive an 'input command' to perform a task, but rather 'input data'. From the input of data they are able to form their own decisions and take actions virtually as a human world. But given it is a machine, it can consider many more scenarios and execute far more complicated calculations to solve complex problems. This is the element that excites data scientists and machine learning engineers the most. The ability to solve complex problems never before attempted. This book will dive in to introduce machine learning, and is ideal for beginners starting out in machine learning."--page 4 of cover.

This edition provides a mix of research perspectives to examine the economic and non-economic outcomes of global developments in financial regulation, monetary and fiscal measures, or sustainable development, with a tailored focus on specifics in emerging and transitioning countries. The volume combines a mix of approaches to investigate relevant newly emerged topics (e.g., economics of emissions, corporate social responsibility reporting) as well as traditional issues requiring new approaches (e.g., exchange rate mechanisms, investment strategies, the impact of corporate reporting on economic fundamentals). Such a comprehensive view of contemporary economic phenomena makes the volume attractive not only to academia, but also to regulators and policymakers, when deliberating on the potential outcomes of competing regulatory mechanisms.

"He wondered what Mrs. Welland would have said if he had uttered the words instead of merely thinking them. He could picture the sudden decomposure of her firm placid features, to which a lifelong mastery over trifles had given an air of factitious authority. Traces still lingered on them of a fresh beauty like her daughter's; and he asked himself if May's face was doomed to thicken into the same middle-aged image of invincible innocence. Ah, no, he did not want May to have that kind of innocence, the innocence that seals the mind against imagination and the heart against experience!"

Doing well with money isn't necessarily about what you know. It's about how you behave. And behavior is hard to teach, even to

really smart people. Money—investing, personal finance, and business decisions—is typically taught as a math-based field, where data and formulas tell us exactly what to do. But in the real world people don't make financial decisions on a spreadsheet. They make them at the dinner table, or in a meeting room, where personal history, your own unique view of the world, ego, pride, marketing, and odd incentives are scrambled together. In *The Psychology of Money*, award-winning author Morgan Housel shares 19 short stories exploring the strange ways people think about money and teaches you how to make better sense of one of life's most important topics.
