Focused Patient Assessment tables include actual questions to help you learn how to effectively phrase questions to patients as well as target physical assessment techniques. Nursing skills at the end of each chapter feature full-bleed coloring on the edge of the page to make them easy to locate. Safety guidelines for nursing skills sections precede each skills section to help you focus on safe and effective skills performance. Detailed care plans in the text and on Evolve demonstrate the application of the 5-step nursing process to individual patient problems to help you understand how a plan is developed and how to evaluate care. Unexpected outcomes and related interventions for skills alert you to possible problems and appropriate nursing action. Patient Teaching boxes help you plan effective teaching by first identifying an outcome, then developing strategies on how to teach, and finally, implementing measures to evaluate learning. Care of the Older Adult boxes highlight key aspects of nursing assessment and care for this growing population. Key points neatly summarize the most important content for each chapter to help you review and evaluate learning. Evidence-Based Practice boxes include a PICO question, summary of the results of a research study, and a F

description of how the study has affected nursing practice — in every chapter. Patient-Centered Care boxes address racial and ethnic diversity along with the cultural differences that impact socioeconomic status, values, geography, and religion. 65 Skills and procedural guidelines provide clear, step-by-step instructions for providing safe nursing care. 5-step nursing process provides a consistent framework for clinical chapters. Concept maps visually demonstrate planning care for patients with multiple diagnoses. NOC outcomes, NIC interventions, and NANDA diagnoses are incorporated in care plans to reflect the standard used by institutions nationwide. Projects are important to industry, but project performance continually disappoints stakeholder expectations. Organizations react to this performance problem in many ways, and purchase consultancy, training, methods and tools as possible solutions. There is no published evidence that any of these solutions are consistently successful in improving project performance. This thesis answers the question, "What can be done to improve project management practices, and thus project performance?" by demonstrating that a novel form of continuous action research can contribute such evidence.

Praise for the previous edition "An extraordinary and important book. Its approach to evidence-based practice (EBP) is very sound, realistic, and generous to the complexities of everyday practice. Reading and using this book is a must." Haluk Soydan, PhD, School of Social Work, University of Southern California "This book has the potential to change practice in the helping professions. Rather than focusing on how to conduct research, Practitioner's Guide to Using Research for Evidence-Based Practice instead shows readers how to understand the literature.... [The] generous use of humor and the inclusion of simple, practice-relevant examples make this book a pleasure to read." Aron Shlonsky, PhD, Faculty of Social Work, University of Toronto "I particularly like the integration of research methods and EBP; this is the book's major innovation in my mind as it allows readers to see the connections between research and practice. [The book] also succeeds by taking very complex EBP principles and explaining them in practical terms." Jeffrey M. Jenson, PhD, Graduate School of Social Work, University of Denver Hands-on guidance for research-informed practice and practice-informed research Now in a second edition, Practitioner's Guide to Using Research for Evidence-Based Practice offers a clinician-oriented approach to appraising and using research as part of the EBP process. This accessible guide presents essential and practical guidance on how to integrate research appraisal into EBP endeavors to determine which interventions, policies, and assessment tools are supported by the best evidence. It introduces: Increased attention to macro-level EBP questions and studies New discussion on defining EBP, including the addition of a transdisciplinary model of EBP More detailed guidance on EBP question formulation and conducting Internet searches, including the PICO framework New content on multivariate designs, including propensity score matching, and on mixed-model and

mixed-methods studies
