Bicycling Maximum Overload for Cyclists Perigee Trade
 Bicycling Maximum Overload for Cyclists is a radical strength-based training program aimed at increasing cycling speed, athletic longevity, and overall health in half the training time. Rather than improving endurance by riding longer distances, you'll learn how to do it by reducing your riding time and adding heavy strength and power training. Traditionally cyclists and endurance athletes have avoided strength and power training, believing that the extra muscle weight will slow them down, but authors Jacques DeVore and Roy M. Wallack show that exactly the opposite is true. The Maximum Overload program uses weightlifting to create sustainable power and improved speed while drastically reducing training time and eliminating the dreaded deterioration that often occurs during the second half of a ride. A 40-minute Maximum Overload workout, done once or twice a week, can replace a long day in the saddle and lead to even better results. This comprehensive program includes unique takes on diet, interval training, hard and easy training, and sustainable power. Backed by the most trusted authority in the sport, *Bicycling Maximum Overload for Cyclists* is a book that no cyclist should be without.

#1 NEW YORK TIMES BESTSELLER • The game-changing author of *Tribe of Mentors* teaches you how to reach your peak physical potential with minimum effort. "A practical crash course in how to reinvent yourself."—Kevin Kelly, *Wired* Is it possible to reach your genetic potential in 6 months? Sleep 2 hours per day and perform better than on 8 hours? Lose more fat than a marathoner by bingeing? Indeed, and much more. The 4-Hour Body is the result of an obsessive quest, spanning more than a decade, to hack the human body using data science. It contains the collective wisdom of hundreds of elite athletes, dozens of MDs, and thousands of hours of jaw-dropping personal experimentation. From Olympic training centers to black-market laboratories, from Silicon Valley to South Africa, Tim Ferriss fixated on one life-changing question: For all things physical, what are the tiniest changes that produce the biggest results? Thousands of tests later, this book contains the answers for both men and women. It's the wisdom Tim used to gain 34 pounds of muscle in 28 days, without steroids, and in four hours of total gym time. From the gym to the bedroom, it's all here, and it all works. You will learn (in less than 30 minutes each):

- How to lose those last 5-10 pounds (or 100+ pounds) with odd combinations of food and safe chemical cocktails
- How to prevent fat gain while bingeing over the weekend or the

holidays • How to sleep 2 hours per day and feel fully rested • How to produce 15-minute female orgasms • How to triple testosterone and double sperm count • How to go from running 5 kilometers to 50 kilometers in 12 weeks • How to reverse "permanent" injuries • How to pay for a beach vacation with one hospital visit And that's just the tip of the iceberg. There are more than 50 topics covered, all with real-world experiments, many including more than 200 test subjects. You don't need better genetics or more exercise. You need immediate results that compel you to continue. That's exactly what *The 4-Hour Body* delivers.

Body For Life DK

The former *Biggest Loser* star and celebrity trainer presents a high intensity workout and eating plan that delivers big results in just 20 minutes a day. From his days as a trainer on *The Biggest Loser*, Bret Hoebel knows that when people log hours on a treadmill, they'll lose weight. But he also knows that most of his clients don't have the schedule or the desire to spend that much time at the gym. And the truth is—the number of minutes you spend working out isn't the key to weight loss: intensity is. Time and again, Brett meets clients who've been making the same mistakes—not only are they focused on the clock, but they're also

concentrating on fat burn and pounds lost as markers of success. And with a fat-first focus on losing weight, plateaus come quickly and often. But it's not about fat, it's about muscle. In *The 20-Minute Body*, Brett explains why the key to long-term weight loss is building muscle. The more lean muscle your body has, the more calories your body will burn at rest. Metabolic muscle is the secret to fast metabolism. And all you need is 20 minutes a day to create it. Additionally, when you focus on inches, not pounds, you'll find that you fit into your clothes better and love the shape of your body. Weight is misleading—muscle weighs more than fat, but it takes up far less room. So throw away the scale and invest in a tape measure to track your success. *The 20-Minute Body* will help you lose 20 inches—from around your stomach, hips, thighs, and arms—in just 20 days. All it takes is 20 minutes of exercise, paired with 20-minute meals that are focused on nutrient quality, not calorie counts. Brett offers readers sample meal plans and recipes for meals, snacks, and desserts the whole family will love—all of which can be thrown together in 20 minutes or less. *Massive Muscles in 10 Weeks* Simon and Schuster

There's plenty of conventional wisdom on health and fitness – but how much of it is scientifically sound? The truth is: less than you'd think. In *Which Comes First, Cardio or Weights?*, physicist and award-winning journalist Alex Hutchinson tackles dozens of commonly held beliefs and looks at just what research science has – and has not – proven to be true: Should I exercise when I'm sick? · Do I get the same workout from the elliptical machine that I get from running? · What role does my brain play in fatigue? · Will running ruin my knees? · To lose weight, is it better to eat less or exercise more? · How should I adapt my workout routine as I get older? · Does it matter what I'm thinking about when I train? · Will drinking coffee help or hinder my performance? · Should I have sex the night before a competition? This myth-busting book covers the full spectrum of exercise science and offers the latest in research from around the globe, as well as helpful diagrams and plenty of practical tips on using proven science to improve fitness, reach weight loss goals, and achieve better competition results.

Men love shortcuts. If there's a way to accomplish a job quicker and more efficiently, they're all for it. That goes for work and working out. Now, new research shows that as little as 15 minutes of resistance training is just as effective in spiking a man's metabolism—his fat-burning furnace—as a workout lasting more than twice as long. All it takes is 15 minutes to achieve lifelong results—and men are more likely to stick to an exercise plan if it's chopped down to those 15 minutes. *The Men's Health Big Book of 15-Minute Workouts* contains fast-paced circuit training and interval workouts that boost calorie burn, build muscle, and fry belly fat in half the time of regular workouts. The Barbell Prescription: Strength Training for Life After 40 directly addresses the most pervasive problem faced by aging humans: the loss of physical strength and all its associated problems - the loss of muscle mass, bone mineral loss and osteoporosis, hip fractures (a terminal event for many older people), loss of balance and coordination, diabetes, heart disease related to a sedentary lifestyle, and the loss of independence. The worst advice an older person ever gets is, Take it easy. Easy makes you soft, and soft makes you dead. *The Barbell Prescription* maps an escape from the usual fate of older adults: a logical, programmed approach to the hard work necessary to win at the extreme sport of Aging Well. Unlike all other books on the subject of exercise for seniors, *The Barbell Prescription* challenges the motivated Athlete of Aging with a no-nonsense training approach to strength and health - and demonstrates that everybody can become significantly stronger using the most effective tools ever developed for the job.
